

## AP Statistics – 2015

### “What advice would you have for students taking this course next year?” from 2014.

Just go home and DO THE WORK. You have everything you need, do what you have to do.

Do all the homework, as one of my coaches once said, practice makes permanent, and it is the best way to master the material. Also, take advantage of the NTA.

Don't think you'll get by from just being in class! Go home and actually study and learn the material.

Make yourself study guides – it sucks at the time, but they are so helpful when it's time to study. Also stay on top of what's going on in class!!! It is much more helpful when you UNDERSTAND the past lecture – go over your notes every night, it only takes a second.

Do the work and you will be happy in the end.

Study, use common sense, use your time wisely (portfolio) and relax! Be a HYENA.

Study hard. Read everything.

Use all your resources and review all of them before tests. And do your HW!

Make sure to do your homework and put in a lot of time into this course in order to succeed.

Don't get behind.

Do the portfolio before it is actually due. And do a good job on the portfolios to study. Do not get cocky and think that you do not need to study if you get a good test grade. The next test will be even harder.

Don't procrastinate! Study – even if you think you know it.

Do what Mr. Mayo says to do! It will help you succeed in his course.

Take the class seriously. Do your homework and make sure you understand the material. Study every instructional material (NTA, website, portfolio) and use it to your advantage. Know your formulas.

Stay focused and don't miss any days.

Work hard, you get what you put in. Don't be shy!

Study. Look over NTA. Be prepared.

Try to understand the concepts rather than memorizing methods/processes. Practice.

Study and you will do very well!!

**“What steps could you have taken to have improved your own learning in this course?” from 2014.**

I could have reviewed the actual textbook information more than I did.

Taken more time to actually read the book.

Done way more homework.

Spending more time on homework.

I wish I could have more time to study.

Gotten more outside help for things that were unclear.

Going back and reading NTA more.

Study NTA before each test.

Do portfolios before the test.

Do my homework more often. Read through the chapters in the book.

Going back and re-doing the problems I missed on tests and homework.

Look over the NTA and portfolio more.

Studied more and completed all homework.

Complete the portfolio on time.

Did homework and study.

Read over the work we did in class more.

More practice.

Studied more at home.
